## KEEPING YOUR PHONES RINGING DURING A BUSINESS RELOCATION OR EXPANSION

## By Barry Cryer, TSC

CARBONDALE, CO —July 30, 2008 — Moving or expanding your company office can be a source of tremendous stress and upheaval — but it also offers an opportunity to upgrade and improve a variety of office features, including your telecommunications system.

Many businesses find that they have outgrown their phone system long before they outgrow their office space. When planning a move to a new or expanded office, it is important to examine all aspects of your telecommunications needs — number and location of phones, voice mail, structured cabling, voice and data integration — to ensure that your new system responds favorably to your present needs, and will be able to expand to accommodate future growth.

There are a number of vital considerations to help you plan effectively for a phone system relocation or expansion with the most important being — selecting the right partner to guide you through the process. By choosing a leading telecommunications provider your company can turn a stressful situation into an easy transition eliminating any interruption to your business. However, selecting an inexperienced partner will cost your organization time, money, and possibly some of your customers.

The following check list will help you through the relocation or expansion process so you can make sure you've identified the right company to keep your phones ringing with no interruption in service: • Select A Telecommunications
Provider With Experience, and Rely
On Their Expertise. You should elect
to work with a provider that has
expertise at the installation, expansion
and relocation of corporate phone
systems. Does the provider design and
install communications systems using
the latest technology, including the
integration of your office computers
with your phone system. In addition to
installing your phone system, will the
provider consult with you on how your
business can maximize your
communications effectiveness.

• Communicate Your
Expectations. Ask your
communications provider to assist you
in thinking your plans through on
paper first, ensuring that the proper
phone configuration is agreed upon
prior to installation. Make sure that the
provider will work with you to
effectively implement any needed
changes to your existing system,
including adding voice mail or
upgrading the phone switch. Be sure to
obtain an accurate indication of the
time requirements needed to make
changes to your system.

• Design Now and Save Later.
An experienced telecommunications partner will take the time to review your facility and electrical drawings, which will aide in developing a game plan. They should provide you with design input, space planning and a communications layout for your facilities' entire structured cabling infrastructure. This should include drawings of specific technical components such as the equipment

room, telephone system, voice mail, server configurations, overhead paging and music, wireless IP, and Internet access.

The key is making sure your provider builds a compact, easy-to-manage, centralized equipment room, which acts as the hub for your business. Ideally, you should receive a design that is flexible and one that can expand as your business grows. Poor designs will cost you every time you call your provider when you need to make even a minor change to your system.

Properly designed and implemented in the blueprint stage saves having to retrofit and issue change orders later, which can be extremely costly. Leading companies do not charge for consultative services or design input. This is something to think about as you select a partner.

• Set A Realistic Move Date. If you want to eliminate headaches give yourself considerable time to plan ahead prior to your move or expansion date. Unexpected events almost always cause delays, and your business will function more smoothly if your move occurs when everyone is ready, instead of in the midst of a last-minute "scramble." You should work closely with a telecommunications systems provider to help you set a realistic schedule for your phone system implementation. This will allow you to alert your customers and vendors of any anticipated phone number changes well in advance of your move date.

• Prevent an Interruption in Service. For many businesses, the

early installation of phone lines, Internet access and new equipment may be critical to having dual service and to providing your customers with uninterrupted service during the entire move. If your provider waits until the last minute to switchover and does not have a plan to provide redundant service then you know something is wrong. An interruption in service can have a lasting impact on any organization.

• Don't Let Anything Fall
Through the Cracks. You should
contact your communications system
provider and give them advanced
notice prior to your move to schedule a
complete analysis of your present and
future phone needs. Due to the highly
competitive nature of local, longdistance, and Internet service, this
additional "shopping" time can result
in substantial savings. A reliable

partner will walk you through this process identifying areas to save money, especially if you find yourself pressed for time.

Finally, make sure you redirect all of your local, toll-free, and fax numbers. Order this work to be done far in advance of your move, because it is vital that this important service be fully operational on Day One in your new facility.

Selecting the right telecommunications partner can make a world of difference when taking on the challenge of relocation or expanding your current facility. Choose an experienced provider that can set up a game plan for you and give you a sense of security that the transition will be a success. Leading providers will eliminate any unforeseen headaches and make what could be seen as a daunting task an

easy one. If you don't, your business could ultimately be in big trouble.
