TSC Launches Secure WiFi-as-a-Service to Protect Customers from Cyber Attacks

*Leading Managed Technology
Services Provider (MTSP)
Leverages Innovative Wireless
Access Points to Secure
Connections to the Internet*

CARBONDALE, CO – September 2019 - TSC, a leading managed technology services provider (MTSP), announced today that the company has launched a Secure WiFi-as-a-Service program to protect its customers from cyber attacks through wireless access points. Over the past few years, the prevalence of cyber attacks has continued to grow, expanding every SMBs' need for cybersecurity. One of the most widely utilized methods by cybercriminals is WiFi hacking through an organization's wireless access points.

WiFi hacking has proven to be one of the most effective means of cyberattacks and hackers are using this specific method to exploit SMBs. However, TSC's Secure WiFi-as-a-Service program comprehensively stamps out this threat and equips SMBs with a means to securely connect to WiFi, so that their businesses can run smoothly, securely and safely. This program goes far beyond the typical protection that most businesses utilize. Common cybersecurity packages include firewall, data backup, antivirus, malware prevention, OS security and patches, yet these solutions are

no longer sufficient protection mechanisms.

In the modern workplace, everything relies on the Internet and a secure connection is now an absolute must for any organization. Unfortunately, the majority of all breaches happen to SMBs and the main reason is that their IT provider is not providing sufficient protection against cyber attacks. SMBs require a secure connection in order to ensure that their employees, networks and customers are protected from infiltration, data extraction and credential theft. WiFi hacking is often overlooked as a security threat; however, as Internet speeds have dramatically increased in performance in recent years, so have the associated risks. WiFi hacking has become prevalent because it's very easy to hack wireless access points.

Fortunately, TSC offers customers a Secure WiFi-as-a-Service program on a month-to-month basis with no capital expenditure. TSC provides its customers with state-of-the-art wireless access points designed to thwart cyber attacks. This unique technology includes a powerful wireless intrusion prevention security system, real-time business driven and location- based analytics, and social-enabled captive portals. The Secure WiFi-as-a-Service program includes technology refresh, so the wireless

access point is always up to date with the latest software and cybersecurity technology.

"The reason that businesses need to secure their WiFi is because these attacks can go undetected for a very long time, which poses serious risks to any company," stated Barry Cryer, President of TSC. "Hackers are only getting smarter and the sooner a business can lock down every entry point into their network the better."

ABOUT TECHNOLOGY SYSTEMS CONSULTANTS

Founded in 1992, Technology Systems Consultants is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allows the TSC team to develop an understanding of each customer's unique telecommunications requirements, and to respond to those requirements quickly and effectively.

TSC's local dispatch center delivers round-the-clock service to ensure system reliability. TSC also offers comprehensive service 24 hours a day, 7 days a week and emergency service guaranteed within 4 hours.
